MODEL SELECTION

RECOMMEND CIRCUIT

Single Output :

RECOMMEND CIRCUIT

Dual Output :

- Add input capacitance C_{in} is helpful to improve the electromagnetic compatibility, recommend C_{in} use 47 μ F-100 μ F of the electrolytic capacitors.
- If the module connect to the digital circuits, please add the C_{out} , C_{out1} , C_{out2} .
- If C_{out} , C_{out1} , C_{out2} value is too high or lower ESR, it will cause the module instable,
- The recommended value of C_{out} , C_{out1} , C_{out2} should be 100 μ F/A, the current here means the output current.

Trim application & Trim Resistance

- In dual and triple output modules, this application can just used in the main load (auxiliary load change together with the main load)

USING ATTENTIONS

- Module will cause irreversible damage when in the state of the input reverse polarity.
- Module will cause irreversible damage when in the long-term overload conditions.
- Module will cause irreversible damage when out of the maximum input voltage range.
