This data sheet is a summary of the specifications and conditions for N9041B UXA signal analyzers.

## Definitions and Conditions

Specifications describe the performance of parameters covered by the product warranty and apply to room temperature range 20 to 30 °C, unless otherwise noted.

95th percentile values indicate the breadth of the population (approx.  $2\sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 50 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but is not covered by the product warranty.

The analyzer will meet its specifications when:

- The analyzer is within its calibration cycle.
- Under auto couple control, except that Auto Sweep Time Rules = Accy.
- The analyzer has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on, if it had previously been stored at a temperature range inside the allowed storage range but outside the allowed operating range.
- The analyzer has been turned on at least 30 minutes with Auto Align set to Normal, or if Auto Align is set to Off or Partial, alignments must have been run recently enough to prevent an Alert message. If the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user. If Auto Align is set to Light, performance is not warranted, and nominal performance will degrade to become a factor of 1.4 wider for any specification subject to alignment, such as amplitude tolerances.
- The term "mixer level" is used as a condition for many specifications in this document. This term is a conceptual quantity that is defined as follows: Mixer Level (dBm) = RF Input Power Level (dBm) - (Electronic + Mechanical) Attenuation (dBm)

## Frequency and Time Specifications

Frequency Range		Input 1	Input 2
Option 590		3 Hz to 50 GHz	3 Hz to 90 GHz <sup>1</sup>
Option 5CX		3 Hz to 50 GHz	3 Hz to 110 GHz
Frequency Band	LO Multiple (N)	Frequency Range	Additional Information
0	1	3 Hz to 3.6 GHz	
1	1	3.5 to 8.4 GHz	
2	2	8.3 to 13.6 GHz	
3	2	13.5 to 17.1 GHz	
4	4	17 to 26.5 GHz	
5	4	26.4 to 34.5 GHz	
6	8	34.4 to 50 GHz	
7	8/12	49.9 to 75 GHz	For Input 2 only
8	12/14	74.9 to 110 GHz	For Input 2 only
Frequency Reference			
Accuracy	± [(time since last adjustment x aging rate) + temperature stability + calibration accuracy]		
Aging rate	± 3 x 10 <sup>-8</sup> / year		
Temperature stability			
Full temperature range	± 4.5 x 10 <sup>-9</sup>		
Achievable initial calibration accuracy	± 3.1 x 10 <sup>-8</sup>		
Example frequency reference accuracy	= ± (3 x 10 <sup>-8</sup> + 4.5 x 10 <sup>-9</sup> + 3.1 x 10 <sup>-8</sup> )		
1 year after last adjustment	= ± 6.6 x 10 <sup>-8</sup>		
Residual FM	≤ (0.25 Hz x N) p-p in 20 ms nominal		
(Center frequency = 1 GHz 10 Hz RBW, 10 Hz VBW)	See band table above for N (LO multiple)		
Frequency Readout Accuracy (Start, Stop, Center, Marker)			
± (marker frequency x frequency reference accuracy + 0.10% x span + 5 % x RBW + 2 Hz + 0.5 x horizontal resolution <sup>2</sup> )			
Marker Frequency Counter			
Accuracy	± (marker frequency x frequency reference accuracy + 0.100 Hz)		
Delta counter accuracy	± (delta frequency x frequency reference accuracy + 0.141 Hz)		
Counter resolution	0.001 Hz		
Frequency Span (FFT and Swept Mode)			
Range	0 Hz (zero span), 10 Hz to maximum frequency of instrument		
Resolution	2 Hz		
Accuracy			
Swept	± (0.1% x span + horizontal resolution) <sup>3</sup>		
FFT	± (0.1% x span + horizontal resolution) <sup>3</sup>		

1. The exact maximum frequency for Option 590 depends on the analysis bandwidth option chosen: Max frequency = (90 - 1/2x (analysis bandwidth in GHz))

2. Horizontal resolution is span/(sweep point-1)

3. Nominal for Input 2 above 50 GHz

- The ADC clipping level declines at low frequencies (below 50 MHz) when the LO feedthrough (the signal that appears at 0 Hz) is within 5 times the prefilter bandwidth (see table) and must be handled by the ADC. For example, with a 300 kHz RBW and prefilter bandwidth at 966 kHz, the clipping level declines for signal frequencies below 4.83 MHz. For signal frequencies below 2.5 times the prefilter bandwidth, there will be additional reduction due to the presence of the image signal (the signal that appears at the negative of the input signal frequency) at the ADC.

1. For wide reference loop bandwidth.

2. Keysight measures 100% of the signal analyzers for Input 1 phase noise at 10 Hz offset from a 1 GHz carrier in the factory production process. This measurement requires a signal of exceptionally low phase noise that is characterized with specialized processes. It is impractical for field and customer use. Because field verification is impractical, Keysight only gives a typical result. More than 80% of prototype instruments met this "typical" specification; the factory test line limit is set commensurate with an on-going 80% yield to this typical. Like all typical specifications, there is no guardbanding for measurement uncertainty. The factory test line limit is consistent with a warranted specification of -89 dBc/Hz.

## General Specifications

### Temperature range

Operating	0 to 40 °C
Storage	-40 to +70 °C

### Altitude

4,500 meters (approx. 15,000 feet)

### EMC

Complies with the essential requirements of the European EMC Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

- IEC/EN 61326-1
- CISPR Pub 11 Group 1, class A
- AS/NZS CISPR 11
- ICES/NMB-001

This ISM device complies with Canadian ICES-001.

Cet appareil ISM est conforme à la norme NMB-001 du Canada.

The N9041B is in full compliance with CISPR 11, Class A emission limits and is declared as such. In addition, the N9041B has been type tested and shown to meet CISPR 11, Class B emission limits. The use of USB accessories, or the enabling of the digital bus, may affect the UXa's conformance to Class B emissions. Information regarding the Class B emission performance of the N9041B is provided as a convenience to the user and is not intended to be a regulatory declaration.

### South Korean Class A EMC declaration

This equipment has been conformity assessed for use in business environments. In a residential environment this equipment may cause radio interference.

\* This EMC statement applies to the equipment only for use in business environment.

### 사용자 안내문

이 기기는 업무용 환경에서 사용할 목적으로 적합성 평가를 받은 기기로서 가정용 환경에서 사용하는 경우 전파간섭의 우려가 있습니다.

\* 사용자 안내문은 “업무용 방송통신기자재”에만 적용한다.

### Safety

Complies with the essential requirements of the European Low Voltage Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

- IEC/EN 61010-1
- Canada: CSA C22.2 No. 61010-1
- USA: UL std no. 61010-1

### Acoustic Statement (European Machinery Directive)

Acoustic noise emission

LpA < 70 dB

Operator position

Normal operation mode per ISO 7779

### Environmental Stress

Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MILPRF-28800F Class 3.

### Power Requirements

Voltage and frequency	100/120 V, 50/60/400 Hz 220/240 V, 50/60 Hz
-----------------------	--

Power consumption

On	850 W (Maximum) <sup>1</sup>
Standby	25 W

1. The actual power consumption depends on the configuration of the instrument. For example, power consumption of an N9041B with Option H1G installed is nominally 620 W.

## General Specifications (continued)

### Display

Resolution	1280 x 800
Size	357 mm (14.1 in.) diagonal (nominal) capacitive multi-touch screen

### Data Storage

Internal	Removable solid state drive (≥ 80 GB standard, or replaced with an 800 GB removable SSD by ordering N9094AKS8D) and secure digital (SD) memory device
External	Supports USB 3.0/2.0 compatible memory devices

### Weight (Basic Configuration)

Net	34.9 kg (76.9 lb) nominal
Shipping	41 kg (90 lb) nominal

### Dimensions

Height	270 mm (10.6 in)
Width	427 mm (16.8 in)
Length	500 mm (19.8 in) <sup>1</sup>

### Warranty

The UXA signal analyzer is supplied with a 3-year standard warranty

### Calibration Cycle

The recommended calibration cycle is one year. Calibration services are available through Keysight service centers

1. 584 mm (23 in) when the front handles are included.

7	NA	NA		-150 dBm/Hz		
8	NA	NA		-149 dBm/Hz		

1. In the 1 GHz bandwidth path, the span and bandwidth will be 40 MHz minimum. Below 40 MHz, a narrower IF path is used.

2. Signal Level is -6 dB relative to full scale at the center frequency.

3. The residual performance is dominated by a single residual 50 MHz to the left of the center of the screen. It is an artifact of the ADC architecture. If residual performance is critical and span requirements are flexible, then reducing the span to 255 MHz and making use of the 255 MHz IF path will eliminate this residual.

1. A noteworthy group of harmonically related sidebands is often present with a level of nominally -80 dBc at 300 Hz and envelope falling off (30 dB/decade) with increasing offsets.
2. Nominally -40 dBc under large magnetic (0.38 Gauss rms) or vibrational (0.21 g rms) environmental stimuli.
3. N is the LO multiplication factor. Refer to page 3 for the N value verses frequency ranges.

## Real-time Spectrum Analyzer (RTSA)

### Real-time analysis

Real-time analysis bandwidth		
Option RT1	Up to 255 MHz	Analysis BW option determines the max real-time BW (max 255 MHz with H1G)
Option RT2	Up to 255 MHz	
Minimum detectable signal duration with > 60 dB StM <sup>1</sup> ratio		For Frequency Mask Triggering (FMT)
Option RT1	11.42 ns	
Option RT2	3.33 ns	
Minimum signal duration with 100% probability of intercept (POI) at full amplitude accuracy		Signal is at mask level Signal is at mask level, span > 85 MHz
Option RT1	17.17 $\mu$ s	
Option RT2	3.51 $\mu$ s	
Minimum acquisition time	100 $\mu$ s	
FFT rate	292,969/s	
Supported Detectors	Peak, Negative Peak, Sample, Average	
Number of Traces	6	
Number of Markers	12	
Supported Markers	Normal, Delta, Noise, Band Power	
Supported triggers	Level, Level with Time Qualified (TQT), Line, External, RF burst, Frame, Frequency Mask (FMT), FMT with TQT
